To: Susan M. White

Mining Program Coordinator

Utah DOGM

Subject: Milla' Martinique permit S/017/046

Dear Ms. White,

In 2007, concerning the site, a report of no reclamations work was reported due to the program requirements of site revegetation for about 3 years. This site was under reclamations prior to the division's rule change of bonding requirements for small mine sites.

If I recall correctly, the site was cleared and re-groomed, smoothed and seeded in summer of 2006, in conjunction with our BLM field inspector, Buzz Rakow. Mr. Rakow has been very pleased with the site reclamations progress and the subsequent growth of natural vegetation at the site. We were under the impression the site would be released by the State, as the BLM seems to be ready to sign off on the site.

I did visit and inspect the site in 2007, and the site has covered very well for this dry arid area. We have not been advised by Utah DOGM personnel, about any concerns with this site to my knowledge. I did not take any photos of the site while there last year, and winter snows at present, preclude us from providing site photographs before Feb. 29th. We will provide site photos as soon as the winter snows recede in the area.

Please let us know what we can do to get this small permit site released by the Utah DOGM. It has been a number of years concerning this site.

Thank you for your time and considerations,

Kim E. Wilson
